Related Component	Version	Date	Latest Version
EHome SDK	V2.1.5.1	2019-1-22	Yes
Network SDK	V6.0.2.35	2019-4-11	Yes

Chapter 2 Updated Features

Deletes configurations and operations of security control devices (such as security control panels, etc.). The iVMS-4200 AC will focus on access control and time and attendance.

Chapter 3 Solved Issues

This section describes the solved issues in the current version.

3.1 Person

Solved the issue that in Person module, after importing persons and face pictures, the person list will be empty after restarting the client and server.

3.2 Access Control

Solved the following issues when adding devices by EHome 5.0 protocol:

- In Access Control module, after removing one person from the access group, and applying the changes to the device, this person still can access the access points of the device.
- In Person module, after deleting one person who has been added to one access group, and applying the changes to the device, this person still can access the access points of the device.

3.3 Time and Attendance

1. Solved the issue that in some conditions, the monthly report might be empty.
2. Solved the issue that the client can receive the attendance records from card reader which is not set as attendance check point.
