

## Preparation

Need to register an email.

## How to configurate email

### Steps:

1. Log in to your mailbox and start smtp service

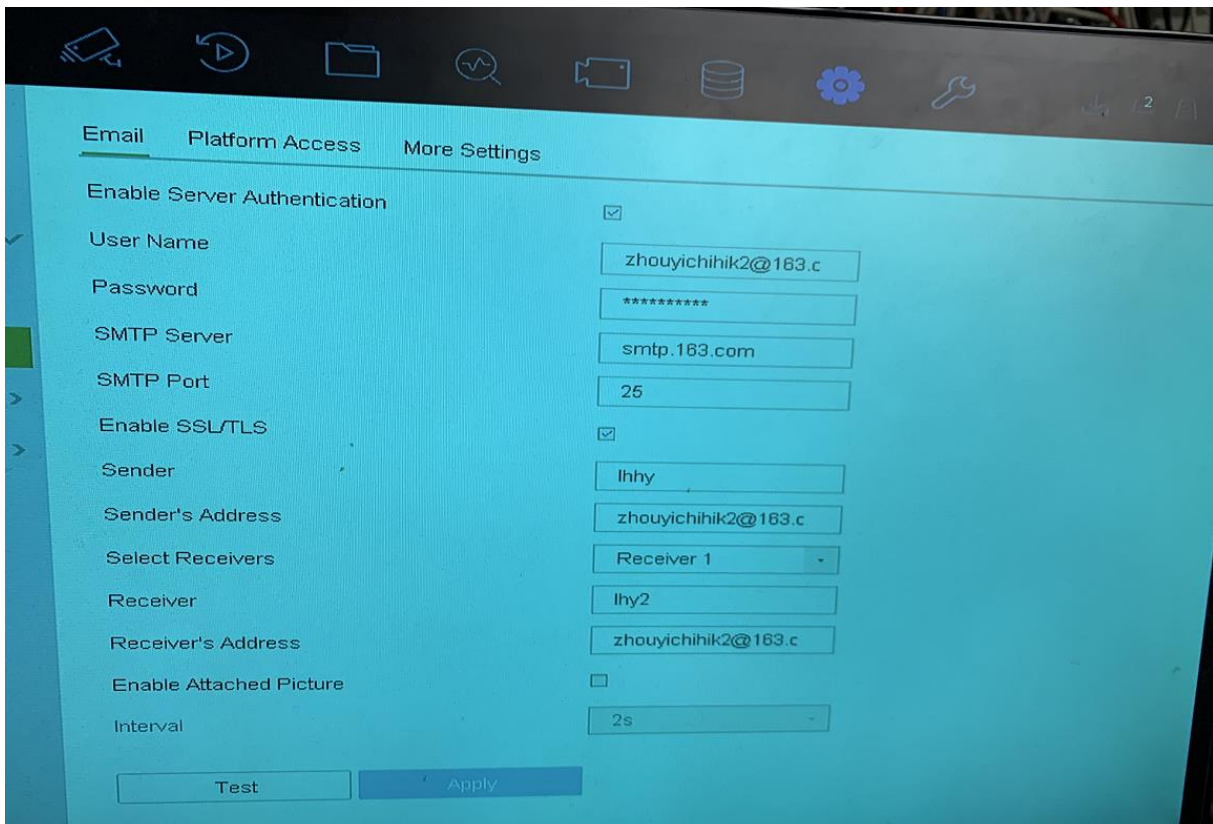

2. Log into the local GUI, and enter system-network-advanced-email, or you can operate in the web browser (configuration-network-advanced-email).
3. Test steps:
  - a、Tick “Enable Sever Authentication”, enter the correct user name(it can be your email) and password(your email’s password)

*Note: Some smtp servers will require verification code to be entered as password*

- b、 Enter the correct SMTP server domain name or address, for example smtp.163.com
- c、 Fill in the recipient and sender information
- d、 Select port 25 and tick "Enable SSL/TLS", or select port 465 and don't tick "Enable SSL/TLS"
- e、 Click the "test"
